

## Enhancement request 1 - confirmation password input

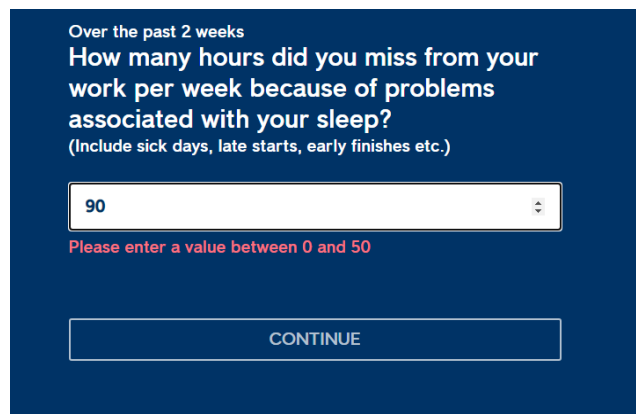

There should be a confirmation password input on the registration page. Currently the registration page is without a confirm password input and this could cause users to enter in passwords that they think are one way but are in fact not the password they thought they entered. This could save time in the long run for users who fat fingered a password, so they don't need to go through the forgot password workflow as they would have ensured that the password they entered was indeed what they thought they entered.

The screenshot shows a registration form on a dark blue background. It includes fields for 'First Name\*' (Megan), 'Last Name\*' (McCormick), and 'Email\*' (megan.mccormick3@gmail.com). Below these is a 'Choose a password\*' field, which is currently empty and highlighted with a red border. A red error message, 'Choose a password is required', is displayed below the password field. At the bottom, there is a text requirement: 'Your password should contain at least 8 characters and at least three of the following: an uppercase letter, a lowercase letter, a symbol and a number.'

## Enhancement request 2 - remove max on the number of hours worked

Currently, when a user is asked about the number of hours worked missed due to sleeping problems, the max number of hours is set to 50. If a user is holding down two full-time jobs that max number could be upwards of 80.

The screenshot shows a survey question on a dark blue background. The text reads: 'Over the past 2 weeks How many hours did you miss from your work per week because of problems associated with your sleep? (Include sick days, late starts, early finishes etc.)'. Below the text is a numeric input field with the value '90' and a small up/down arrow icon. A red error message, 'Please enter a value between 0 and 50', is displayed below the input field. At the bottom, there is a 'CONTINUE' button.
